BOOKMARK

Icon Art Production is to host a free camera workshop on 28th and 29th October to offer film makers, cameramen, screen writers & individuals with hands-on training with the latest cameras alongside an experienced team of cameramen, sound assistants, producers and directors to guide and share their experience and demonstrate techniques and methods to make short films and documentaries.

The workshop will cover six popular cameras - the DSR 450, Canon 5D, Canon 7D, PMW F3, PMW 350 and S12K Digital cinema camera in an attempt to combat what organizer Zakir Hussain describes as the tendency for camera operators to only use one camera once they start work for an organization, which typically favours one model.

The workshop will also look at cameras' influence on films, story budget and offer shot by shot guides to various shooting methods. It aims to give attendees a grounding in film making styles including feature scenes, short films and documentary films.

For more information and to register, before 25th October, visit WWW.ICONARTPRODUCTION.COM
