Universal Film Makers, an initiative by Icon Arts Production, has gone live online.

The initiative aims to support local film makers in the UAE to realise their dreams by supplying state of the art hardware, supervision and advice to aspiring film makers, as well as building a database of volunteer crew and actors, creating a not-for-profit online and real world community for film makers and those with the talent and desire to make it in the industry.

Founder Zakir Hussein comments: "Universal Film Makers is one of my greatest dream projects through which we will support and encourage local & international film makers. We are focusing on local talent's to provide them the best possible facilities and make their films a success.

"I personally believe that any vision and mission started with a purity of heart, if worked hard towards it's execution with all dedication, we can achieve the desired goal. By the grace of God & with the support of great team, media, talents, public and all well wishers, we will together achieve the success.

"It takes courage to stand up for other's dreams and encourage them to achieve their dreams. We hope our Universal Film Makers will make important contributions towards producing some great short films, documentary and feature films in UAE which will be recognized in the local and international industry."
